

Second letter (copy)

Dear sir/madam

In response to my question, you sent me a suitable response and I was so pleased to hear from your future cooperation with Iranian client companies, I am taking of permission two platforms for industrial development, also a cluster for Halal food and intention to establish silicon valley that I had certificate about that:

1. The government has decided that The development of the country's ecosystems and each ecosystem consists of 50 to 100 villages those it in plan of development plan, we need to alternate industries, changing of those to final product with maximum value added and create employment for the youth of those areas, we have most diversities ecosystems in Iran and many of them are rare, I would like to start by foreign technological organizations one of those ecosystems projective platform and I will send necessity information for every licensor who would like to cooperate with Iranian clients' companies in future base on runtime as; feasible study, specs, the agent bank and etc. in this platform needs to batching machinery (discontinually).
2. The second platform is an industrial town To modernize its technology and that needs to continued plant and at least 500 factories in the place one that fortunately specified place and Production halls and should be Determine the developmental found and how about foreign participation, off course, any transfer technology(license technology) needs 14 stages for all transfer it by 65 technical documents, and must be exchange information The two sides (licensor and licensee) and Obviously, Any success in two platforms(as pattern) will take up enjoyment in private sectors for two partners.

3. I picked the certificate silicon plant 10 years ago, and this plan in the best place on Iran. In terms of climate and surrounded between sea and prosperous mountains, there are land and some features and it needs to foreign investment, All my options for this project is, If necessary I can send the summary of this plan for Investors volunteers.
4. These plans are pattern -industrial model and For this amount would not end is not the purpose of passing, and it is generalizable, and its continuation depends to technical cooperation, the emergence of loyalty coefficients, the accuracy of the assumptions of sustainable development and establishing a post-industrial company with partners and gathering of experts highlight advisers and This partnership gives us the intelligence side.
5. I would like to do many new activities In creating post-industrial markets, creation of Hallal cluster by 10 trillion USD (the value and volume of the present market was two trillion \$ and one-third of that in China's hand), General plan is known to me and I have written many details, so, the diversities participations in this huge project, there are many benefits for participants.
6. Ladies and gentlemen, it is finished, Past assumptions of classical economics, new classic and capitalisms, and the future of the world economy depends on assumptions those I put of many articles in web-site (www.elmemofid.cm), try to have communicated more and we exchange correct information to prepare ourselves for necessary participation with what we have and just gain our interests.

Best regards
